

shallow valleys) containing thick layers of clayey

Map areas in which no patterns or symbols are shown;

primarily valley floors, ridge tops and broad benches; modification by excavation and fill may

includes slopes where landslides are sparse.

The first five digits of the open file number designate the specific 1:250,000 scale map sheet of which this quadrangle is a part. The last two digits designate the position of the quadrangle in a subdivision of the 1:250,000 scale map based on rows and tiers shown in the diagram to the right. The location of this quadrangle is shown by the black square.

soil that are very susceptible to sliding where

excavation breaks continuity of slope and where

overloaded by artificial fill.

AREAS LEAST PRONE TO LANDSLIDES

lead to local landslides.

COLLUVIAL SLOPE

Valley wall along major streams with slope as steep as 40° (85%); stony, clayey silt soil up

to 50 ft. (15 m) thick; commonly buttressed by

removal of terrace or bench, and overloading;

a terrace or bench at the toe of the slope; very susceptible to sliding by cutting of toe area,

slide commonly activated without apparent cause.
